

Make the output a certain way  
We will be using Google optimization tools

Focus on test spec  
Push to a test branch

This sprint; UI and backend

Did UML - what do we need to keep track of - bus drivers, etc

User storage?  
In a SQL database. (lindsay is taking database)  
Needs to be secure - need a password. Character array

Back end code is in michael's branch

Take CSV from front end and pass to back end

Do it as JSON  
Dont parse as CSV and then make it JSON...

What will we be providing?  
Which parts of the back end will we be doing for 210?  
Google opt tool. Specific one for routing,. Takes in similar data points that we have for the Ride - using this will be helpful. At least use part of it.

210 will send their API.

Have a contract between the two teams - method signature u will use and this is what u will return

- Tests!! Junit and test spec
- Go with this algo
- Link up with the two teams
- Working with google opt tool.
  - Research test functionality

Mass Open Cloud?  
Talk to alex  
Couple of other teams have started.  
Implement a data base - deploy to that as well?  
Make an instance and ?  
Each team has its own instance. Separate VMs

Integration with Jenkins?

- Have not used it yet-- have it set up

Expected to see tests and sample code - otehr teams have that

NEXT SPRINT MAKE SURE WE HAVE THAT
