

Sneha's Input:

Need to go above and beyond on the requirements in order to get an A  
Doing the bare requirements only is worth a B

A group that got an A:

Already built a UI with a tech stack, and built in dummy data

Algorithm Research

Uploaded documents on Confluence with Comments

Git pushes in all different branches

Java has Google Maps API

Java Script Apis?

Front End Tech stack is HTML and CSS

Need to decide what we need for techn stack

Lindsey/Olivia - doing research on algorithm and UML Work

Lindsey - Usability Study

Sophie - UI Stuff

Research ways to track mapping

Google Maps API

Plan to implement specific objects

Dummy Data?

Testing frameworks

React Testing Frameworks(?)

Write interface first, then push it

Write tests, then push

Always write tests

Mass Open is like AWS, where you can create instances, use it as a server

Ex. VM in the cloud, deploy thered

Write a test spec for the front end testing
